Crisp Radishes from Early Spring Until Late Fall

Early Sugar

DISCO PUMPKIN

- 480 **EARLY SUGAR**—The best known pie pumpkin, early and small, excellent quality and flavor.
- 481 **JAPANESE PIE**—Pear-shaped with long neck, dark green skin. Early and sweet. Used for pies and stock feed.
- 482 **KING OF THE MAMMOTHS**—Rightly named since they weigh as much as 75 to 100 pounds. They keep well, and can be used for pies as well as for stock.
- 483 **LARGE CHEESE or KENTUCKY FIELD**—Hardy, productive, and a good keeper. Weighs about 10 pounds. The standard variety for canning.
- 484 **CONNECTICUT FIELD**—Usually grown in cornfield for stock. Used also for pies and canning. Weight about 20 pounds.

DISCO RADISHES

TURNIP OR ROUND VARIETIES

- 492 **SCARLET GLOBE**—The most desirable of early radishes, is crisp and mild in flavor until nearly an inch in diameter. Every member of the family will approve a generous planting for the early spring garden.
- 493 **SCARLET TURNIP WHITE TIPPED**—Especially attractive, this early two-colored radish is a favorite because of its tasty flavor and crispness, and will not become pithy until 1½ inches in diameter.
- 495 **WHITE GLOBE**—A white-skinned variety, tender and crisp.
- 505 **CRIMSON GIANT**—The largest of the early round radishes, yet as mild and crisp as the smaller ones at their best.
- 496 **TURNIP VARIETIES, MIXED**—Each individual preference can be met if this mixture is planted. A wise purchase for a small garden.

Radish, Scarlet Turnip White Tip

- OLIVE OR OVAL-SHAPED VARIETIES**
- 497 **FRENCH BREAKFAST**—A small, quick-growing sort, rich scarlet color ¾ of its length, the end pure white. First rate quality.

LONG SHAPED VARIETIES

- 500 **CHARTIER**—Though similar to French Breakfast in color markings, it is much larger, often 7 to 8 inches long, and thick, yet tender and brittle.
- 501 **ICICLE**—The most popular white home garden variety, roots 5 to 6 inches long.
- 504 **LONG BRIGHTEST SCARLET**—One of the best and earliest of the long, scarlet radishes, crisp, fine quality.
- 503 **ALL VARIETIES**—A mixture of all the summer varieties.

FALL AND WINTER VARIETIES

- 510 **BLACK SPANISH ROUND**—A somewhat roughened, black skin covers a crisp, white pungent interior. A good keeper, 3¼ to 4 inches in diameter.
- 511 **BLACK SPANISH LONG**—The best keeper of the winter radishes, it closely resembles the round type in flavor. Length 8 to 9 inches, diameter 2 to 3 inches.
- 512 **CHINA ROSE (Scarlet China)**—One of the best winter radishes, smooth, rose-colored skin, white crisp interior. Four to 5 inches long 2 inches thick. Treat with Semesan Before Planting

Radish, Scarlet Globe

Special prices given to market gardeners and those who use large quantities of garden seeds. Please write us if interested in quantity prices. Giving us a list of your requirements and special prices will be quoted to you by mail.

Try a New Squash This Spring—Buttercup is a Dandy
DISCO RHUBARB

521 VICTORIA—An excellent hairy variety for home use. Plants grown from seed will not all come true, but it is an inexpensive way of procuring plants, and the undesirable ones can be discarded, and the good ones will grow quickly and easily. Stalks should not be cut until the second year.

Buttercup

DISCO SQUASH

560 EXTRA EARLY ORANGE MARROW—The earliest of the Marrow squashes, very prolific and a good keeper.

551 GIANT SUMMER CROOKNECK—The largest summer variety, and one of the earliest.

552 GOLDEN HUBBARD—Similar to a Hubbard in form, it is orange-red in color, and earlier.

553 IMPROVED HUBBARD—The standard winter squash with a dark green moderately warted shell. The flesh is fine grained, thick and dry, of excellent flavor.

554 WARTED HUBBARD—The best keeping squash because of its heavily warted shell, it is a favorite for marketing. It is fine quality, and grows to nearly double the size of the common Hubbard.

555 EARLY WHITE BUSH SCALLOP—Very early summer squash.

558 DELICIOUS—An early winter variety, medium sized, pear-shaped. Especially noted for its good flavor.

559 MAMMOTH WHALE—Two to three feet long, gray-green shell.

560 TABLE QUEEN—The smallest squash, it is often called Acorn or Individual. When baked it makes two servings of excellent quality and flavor.

561 KITCHENETTE—A convenient family size, it keeps well, yields generously, and is first quality for table use.

562 BUTTERCUP—Another introduction by Prof. A. F. Yeager of the North Dakota Experimental Station. This is the very best squash we ever tasted. It is nonfibrous in texture and an excellent keeper. The flavor is unsurpassed and very sweet. Order early as stocks of seed are rather limited. (See illustration.)

DISCO SWISS CHARD

80 LUCULLUS—Only the tops of this beet are used. The leaves, mild and spinach-like in flavor, provide a great mass of tender, light green foliage. The thick, white stalks are splendid for creaming like asparagus. It replaces spinach during the hot weather, and will yield until frost if kept cut.

DISCO SWEDE or RUTABAGA

818 DISCO SPECIAL GARDEN or TABLE SWEDE—Popular for home and market. The large, globular roots are a deep purple, and above ground, light yellow below, the flesh is creamy yellow, of fine texture and flavor. Yields well, and will keep well spring. A valuable food for stock. The growing season is longer than for turnips.

DISCO SALSIFY or VEGETABLE OYSTER

525 MAMMOTH SANDWICH ISLAND—Extensive because of its oyster flavor, these nutritious roots are 6 to 8 inches long, 2 inch thick. They are ready for use in October, and can be stored for winter use, or left in the ground until spring.

DISCO SPINACH

535 BLOOMSDALE or SAVOY—Very early and hardy and one of the best for market and canning.

536 LONG STANDING ROUND SEED—Slower growing than Bloomsdale; leaves very large and of good substance.

537 KING OF DENMARK—Stands longer than Bloomsdale, large, bilobed leaves, low growing plants.

Savoy Spinach

540 NEW ZEALAND—Most heat-resistant variety, and if kept cut will provide tender delicious greens until frost. The plants which thrive on almost all soils produce groups of small fleshy leaves. Each branch produces others. It is not a true member of the Spinach family.
